

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1. (canceled).
2. (currently amended): The organic EL display laminate type organic switching element according to claim 5 4, wherein the ~~configuration of the switching element is such that~~ the control electrode also serves both as ~~the~~ a cathode of the organic EL element part and as ~~the~~ an anode of the organic switching element part.
3. (currently amended): An organic EL display, wherein an image plane is composed of a plurality of pixels and the pixels each have two or more subpixels, and wherein the two or more subpixels have emission areas, which have sizes that are different from each other.
4. (canceled).
5. (currently amended): The organic EL display according to claim 3 ~~or~~ 4, wherein the subpixels each are constructed with ~~the~~ an organic EL laminate type organic switching element in which ~~the~~ an organic EL element part and an organic switching element part are laminated on each other, and ~~the~~ a control electrode is provided to which ~~the~~ a control signal line

for controlling ~~the~~ an emission/nonemission condition of the organic EL element part is electrically connected.

6. (currently amended): The organic EL display according to claim 5, wherein the display is constructed in such a way that the two or more subpixels are supplied with control signals different from each other so that the gradation display of the pixel is made possible.

7. (new): The organic EL display according to claim 3, wherein an emission area of the pixel including the two or more subpixels is varied by controlling emission/nonemission conditions of the two or more subpixels.

8. (new): An organic EL display comprising a plurality of pixels, wherein each of the pixels has at least a first subpixel and a second subpixel,  
wherein the first subpixel has an emission area having a first size, and  
wherein the second subpixel has an emission area having a second size, which is different than the first size.

9. (new): The organic EL display according to claim 8, wherein each of the first subpixel and the second subpixel is formed of an organic EL laminate type organic switching element, which comprises:

an organic EL element;

an organic switching element which is laminated on the organic EL element; and

a control electrode, which is electrically connected to a control signal line for controlling an emission/nonemission condition of the organic EL element.

10. (new): The organic EL display according to claim 9, wherein the first subpixel and the second subpixel of each of the pixels are supplied with different control signals to make a gradation display of each of the pixels.

11. (new): The organic EL display according to claim 8, wherein an emission area of each of the pixels is varied by controlling emission/nonemission conditions of the first subpixel and the second subpixel of each of the pixels.
